Charting Your Cloud Migration Journey For Financial Services

Financial Service Institutions (FSIs) are amongst the earliest adopters of emerging technologies; they are constantly striving to lead transformation in the customers' digital experiences.

However, many are struggling to find a place in the digital banking world, especially long term.

Adherence to regulations, new digital banking licenses, personalisation needs, and demands for online channels drive change across the industry. The key focuses of FSIs require a solid cloud infrastructure to provide personalised services globally.

However, what needs to be a consideration is if new business models providing profit and growth can be created within regulatory requirements?

Or is building a secure, scalable, and innovative platform in the cloud just a distant, unachievable pipe dream?

Identifying the key priorities

How you approach emerging challenges and prepare for new opportunities will define how you compete in today's digital marketplace — which is why it has never been more crucial to get it right.

The truth is, not everyone can get it right the first time, every time. What many organisations lack is a powerful mix of advisory, digital transformation and research capabilities. Tools that help you close the gap between where you are and where you need to be.

With most consumers now fully immersed in the digital age, they interact with businesses across more channels than ever before. Having a strategy is just the tip of the iceberg – today's FSIs organisations must lead change or face being left behind.

Risk management, compliance and security

The rise in regulatory requirements means FSIs are expected to protect privacy while using data to drive value.

Profit and growth

The share of Asia-Pacific consumers actively using digital banking increased sharply in emerging markets from 2017 to 2021, rising 33 percentage points from 54% in 2017 to 88% in 2021. ([McKinsey & Company](#))

Personalised customer experience

Involves more than any single touchpoint – it impacts how data is used and collected to enhance relationships, providing value across the journey.

Are you capitalising on cloud technology?

A holistic cloud journey requires a defined strategy

Do you know exactly what your firm needs?

But first, why migrate to Cloud?

Cloud adoption provides advantages, such as increased business agility, heightened data security, cost savings, higher returns on equity and the ability to integrate the latest technology with the entire infrastructure.

How do I know what I need?

As cloud adoption is a process, each journey is unique. Charting the right course requires an understanding of where you are currently.

Here are three main priorities that FSIs organisations focus on:

Priority One

Risk Management:
Security + Compliance

Priority Two

Profit + Growth:
Cost Reduction

Priority Three

Customer Experience:
Intelligent Omnichannel

With the right partner and a sound strategy, cloud adoption future-proofs FSIs organisations for the next generation of growth and sustainability.

Achieving Goal One - Risk Management (Security + Compliance)

As constant changes are impacted by government digital requirements and standards, **compliance and security** are becoming ever more critical for successful cloud adoption. With **cyber-attacks rising**, it's clear that firms must have multi-cloud compliance is integrated to minimise complexity.

As many FSIs operate external services, they require enhanced protection to ensure data and applications are safe and compliant. This brings about change to the organisation which leads to an evaluation of its security posture.

Rackspace Technology Recommends

To handle threats effectively, organisations must look for a security partner that consolidates threat intelligence, security analytics, alerts and response services into a solution that can easily be deployed and managed across multi-cloud environments. With a Cloud Security Workshop delivered by Rackspace Elastic Engineering for Security, your organisation gets a customised threat and vulnerability analysis of your AWS environment and learns how to build and operate a more robust cloud security system.

Achieving Goal Two - Profit + Growth

In many cases, profit and growth are limited by the functionality and state of the infrastructure. Legacy infrastructure will limit the ability of FSIs to innovate.

Some FSIs have no choice but to take existing legacy infrastructure into account at every turn. When they seek to develop new services or implement digital solutions, they have to ensure proposed upgrades are compatible - any new technology needs to be able to be utilised within the organisations existing infrastructure, systems and procedures.

Rackspace Technology Recommends

As replacing legacy infrastructure can be costly and fraught with challenges, incremental upgrades can help achieve progress instead. The truth is many fail to fully leverage tools and are inherently limited in scope due to the nature of traditional systems. Through a series of workshops, Rackspace Technology AWS experts will meet with your subject matter experts to get a clear picture of your current and desired states and brainstorm solutions with your team, from strategic decisions on the operational structure to the selection of the right tools and platforms.

Achieving Goal Three - Winning The Customer

The future of FSIs is about 'going where the consumers go' - to incorporate relevant financial products and services into their everyday lives to enhance user convenience. Achieving this involves building loyalty and advocacy with intelligent, scalable, seamless omnichannel experiences to increase spending.

As user expectations continue to grow, the need to evolve FSIs becomes even more pronounced to meet varying needs. Customised recommendations will increasingly play a role in differentiating offers while tailoring services or products to each individual.

Rackspace Technology Recommends

Technology, such as big data and machine learning, is positioned to help generate new insights that potentially alleviate issues and advance customer service. Through our Data Discovery Workshop, Rackspace Technology's data experts will work with your organisation to determine the technical and business requirements of your project, design a high-level solution that taps the power of analytics solutions in the cloud and demonstrates the possibilities for your business.

This is how Rackspace Technology comes into play - Our Approach

In the past, many FSIs have followed a traditional sit-and-wait mentality where in this fast-paced, technology-centric world, a reactive approach to cloud adoption is unlikely to give you the results you're hoping to achieve. Instead, a proactive approach has been used as a guided framework to understand the current position of your cloud journey, setting goals for how to improve with the right execution plan that still allows flexibility.

Rackspace Technology combines decades of experience and expert guidance with a deep understanding of the security, performance and scaling needs of the financial services industry. The result is the ability to deliver secure cloud solutions, all tailored to the financial services industry, including banking, investment firms, insurance companies, ISVs and fintech organisations.

The Rackspace Technology Difference

It's no longer enough to just "be in the cloud." Many are under pressure to use cloud technologies to solve strategic problems, build new revenue streams, and decrease costs.

As the pace of innovation accelerates like never before, we need to transform how we operate in the cloud and evolve to become cloud-native. As we pursue this evolution, we need more than just support. We need help understanding how to scale our IT teams in an agile world, transforming environments, and streamlining operating models.

As IT teams break down the traditional build, overcome barriers, and open up new possibilities to accelerate innovation — they need more than the traditional MSP models constrained to fit inside the boundaries of the past.

What is needed is a **Modern, Highly Collaborative Support Model Built**, such as **Rackspace Elastic Engineering**, which provides on-demand access to a team of highly skilled AWS experts working alongside your team to drive cloud solution outcomes.

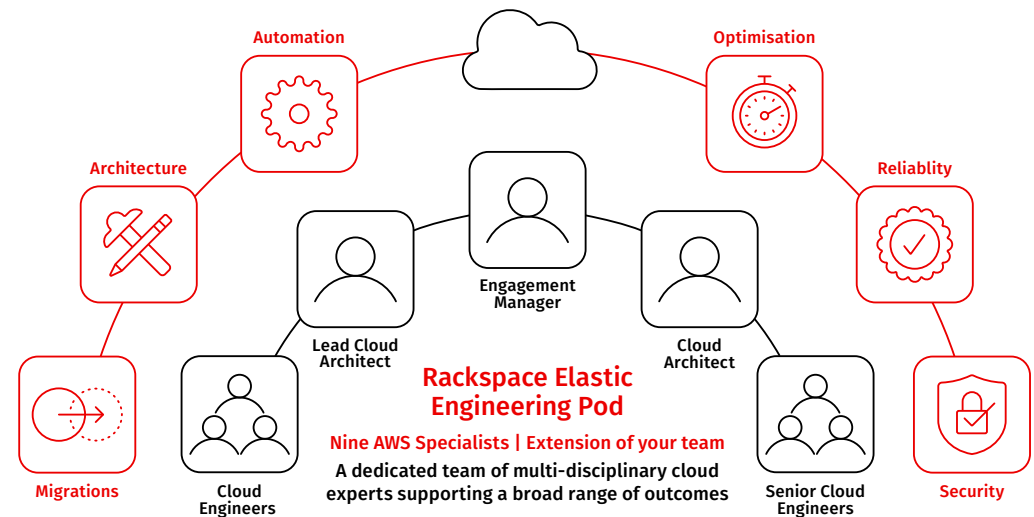

Keep skills and operational capacity aligned with AWS innovation

Rackspace Elastic Engineering (REE) provides your firm with access to a pod of cloud engineers — working as an extension of your team to shape better outcomes as you evolve to cloud-native.
