Rackspace SDDC Flex

Combine the best characteristics of both public and private cloud leveraging easy-to-use VMware services.

Bring greater agility to your multicloud workloads with Rackspace SDDC Flex.

You get easy access to Rackspace Technology managed services along with the best attributes of both public and private clouds — plus the ability to scale up or down as needed.

Rackspace SDDC Flex offers consumption pricing, flexible infrastructure, automation, DevOps and rapid deployment in a VMware® environment that enables you to take advantage of these services without rearchitecting your workloads. This solution has been engineered from the ground up leveraging VMware Cloud Foundation with Dell EMC VxRail to enable full VMware SDDC self-service capabilities through VMware Cloud Director.

Rackspace SDDC Flex also offers add-on services that range from data protection and VM management to the hands-on help that comes with Rackspace Elastic Engineering.

If you're looking for a quick move to the cloud, easy entry into VMware services, and a flexible menu of additional services, Rackspace SDDC Flex is the answer.

Key Benefits

- Control and manage cloud costs through pervasive consumption models.
- Benefit from the agility of the cloud while leveraging your investments in VMware technology and skills.
- Take advantage of additional resources and VMware expertise to move to the cloud.
- Lower the barrier of entry to VMware services.
- Lower the cost of traditional and steady-state workloads.
- Free up valuable IT resources to focus on business-critical initiatives.

Key Features

Consumption-based pricing: Pay for only what you use instead of paying for excess capacity. Enable predictable pricing models for data center (computer, storage, networking) and lifecycle services that fit your business model and financial needs.

Improved cloud economics: Move from the time and cost of physical infrastructure to an opex model with a lower cost of entry to VMware services.

Rapid deployment and on-demand scaling: Spin up a new account and scale up or down in minutes to accommodate traffic peaks or seasonal promotions. We make it easy for you to dynamically adjust resources to fit current demands.

Self-service: Expand and shrink your VMware environment in minutes to meet business needs without opening a ticket. A self-service multicloud portal increases visibility into resources, costs, billing, payments and identities across the infrastructure and as-a-service operations in real-time.

Robust UI and DevOps: Whether through the easy-to-use UI or both open-source and proprietary automation tools, complete a variety of infrastructure administration tasks to drive consistent, automated provisioning at scale. Automate complex infrastructure-as-code and take advantage of CI/CD pipelines.
